Milwaukee, WI 53202

INVESTMENT STRATEGY PROCESS

The Fund employs a long/short investment strategy in an attempt to achieve capital appreciation and manage risk. The Fund takes long positions in securities Otter Creek believes to be undervalued and short positions in securities Otter Creek believes to be overvalued. The Fund's objective is to provide long-term capital appreciation.

PERFORMANCE

	MTD ¹	QTD ¹	YTD ¹	Since Inception ¹	1-Year ²	3-Year ²	Since Inception ²
Institutional Class (OTTRX)	1.91%	1.91%	-2.24%	17.68%	-4.79%	1.24%	4.21%
Investor Class (OTCRX)	1.92%	1.92%	-2.42%	16.78%	-5.06%	1.00%	3.98%

² Annualized as of previous quarter-end June 30, 2017

Performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month end may be obtained by calling 855-681-5261.

Performance data quoted does not reflect the redemption fee. If reflected, total returns would be reduced.

The Fund's investment adviser has contractually agreed to waive a portion or all of its management fees and pay Fund expenses (excluding acquired fund fees and expenses ("AFFE"), interest, taxes, interest and dividend expense on securities sold short and extraordinary expenses) to cap the fees at 1.70% for the institutional class and 1.95% for the investor class until at least February 28, 2018. The expense ratios as per the previous prospectus were 2.79% gross and 2.76% net for the institutional class and 3.09% gross and 3.06% net for the investor class. The net expense ratios are applicable to investors. The expense ratios are based on the estimated amounts and may not reflect the actual expense ratios.

This chart illustrates the performance of a hypothetical \$10,000 investment made in the Fund since inception on December 30, 2013. It assumes reinvestment of dividends and capital gains, but does not reflect the effect of any applicable sales charge or redemption fees. This chart does not imply any future performance.

Month End Attribution

The Otter Creek Long/Short Opportunity Fund Institutional Class appreciated 1.91% in July. The S&P 500 was up 2.06% during the month.

For the month, the portfolio's delta adjusted exposure was slightly net long, approximately 10%. Our long portfolio appreciated 2.4% while our short portfolio (inclusive of puts) detracted 0.4%.

The largest winner for the month was our short position in Elli Mae Inc., which added 0.68%. Elli Mae fell approximately 20% after reporting disappointing earnings and forward guidance. After the shares fell dramatically, we were able to cover our short equity position and sell a large portion of our puts. In addition, our short exposure to for profit education space, which we highlighted during our Q2 Webcast, contributed approximately 0.60% during the month. After the securities rerated significantly lower we reduced our exposure to the space. The largest contributor on the long side during the month was our position in Nextera Energy Partners, LP which contributed 0.43%. The largest detractor during the month was our short position in Stifel Financial Corp, which subtracted 0.39%.

Portfolio Level Commentary

Since the end of June, our gross exposure has not changed materially and remains approximately 153%. Our net long exposure decreased slightly from 12.7% to 9.5%, delta adjusted, during the month. In aggregate, our put exposure represents roughly 3% of capital.

Our success during the month was driven by security selection as we entered the heart of the second quarter earnings season. Individual securities began to experience more volatility since the election despite overall market volatility remaining unusually low. We are cautiously optimistic that single stock and market volatility increases going forward considering record stock prices, peak valuations, and investor complacency.

Quarterly Webcast

Portfolio Managers, Tyler Walling and Mike Winter, hosted a webcast on July 19th, 2017 to review the second quarter and our outlook for the remainder of the year. During the presentation we discussed our investment process, Q2 attribution in greater detail and our investment thesis on several positions and investment themes both new and old. A replay of the call and presentation is available for review on our website, <http://ottercreekfunds.com/resources.html>.

The members of Otter Creek appreciate your continued support and trust. If you have any questions, please do not hesitate to reach out.

The Standard and Poor's 500 Index (S&P 500) is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. The Morningstar Long/Short Equity Category is a composite of returns produced by Morningstar which can be used to compare the returns of other mutual funds in the same category. © 2015 Morningstar. Fund holdings are subject to change and should not be considered a recommendation to buy or sell any security. Otter Creek Advisors, LLC is the Advisor to the Otter Creek Long/Short Opportunity Fund which is distributed by Quasar Distributors, LLC.

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The statutory and summary prospectuses contain this and other important information about the investment company, and may be obtained by calling 1-855-681-5261 or visiting www.ottercreekfunds.com. Read carefully before investing.

Mutual fund investing involves risk; Principal loss is possible. The Fund is non-diversified meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. Investments in debt securities typically decrease when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in Asset-Backed and Mortgage-Backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Investments in foreign securities involve political, economic, and currency risks, greater volatility, and differences in accounting methods. The Fund may use certain types of exchange traded funds or investment derivatives. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. ETF investments involve additional risks such as the market price trading at a discount to its net asset value, an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a fund's ability to sell its shares. Short sales of securities involves the risk that losses may exceed the original amount invested. Investments in Master Limited Partnerships (MLPs) which concentrate investments in the natural resource sector and are subject to the risks of energy prices and demand and the volatility of commodity investments. Damage to facilities and infrastructure of MLPs may significantly affect the value of an investment and may incur environmental costs and liabilities due to the nature of their business. MLPs are subject to significant regulation and may be adversely affected by changes in the regulatory environment. Investments in IPOs are subject to market and liquidity risks and such investments may have a magnified impact on the performance of the Fund. To qualify for treatment as a regulated investment company ("RIC") under the Internal Revenue Code ("Code"), the Fund must meet certain income source, asset diversification and annual distribution requirements. If, in any year, the Fund fails to qualify as a RIC for any reason, the Fund would be taxed as an ordinary corporation and would become (or remain) subject to corporate income tax. The resulting corporate taxes could substantially reduce the Fund's net assets, the amount of income available for distribution and the amount of the Fund's distributions.

Earnings growth is not a measure of the Fund's future performance.
